

SPACEPOLE PAYMENT static mounting solutions at a glance

Speaking with leading retailers, many see the protection of payment devices as a major concern. The most important piece of tech at the point of sale and point of payment is under attack any time it is used. Mounting a payment terminal is proven to vastly reduce call out and replacement charges to damaged terminals from accidental drops.

SPACEPOLE DURATILT®

Our patented DuraTilt payment mount is our signature solution. Combined with a MultiGrip™ plate and SpacePole, this gives a solution that is stable, secure and provides all the tilt, rotation and accessibility that you will ever need. As our MultiGrip plates are compatible with payment terminals from all the major manufacturers, should you wish to upgrade the terminal, you simply swap the plate. Maximum upgradeability and low total cost of ownership.

PCI BEST PRACTICE

In association with Kensington, we have developed a push-lock especially designed for SpacePole MultiClip, which not only secures, but contributes to the elegant and minimalist appearance of the total solution.

For our other payment solutions, ClickSafe security locks and tethers are available. Both are in compliance with PCI best practice recommendations.

SPACEPOLE STACK™

This popular solution gives you two height options in one box. Made of glass-fiber reinforced ABS plastic, it is a robust payment mount and is compatible with our MultiGrip plates.

SPACEPOLE MULTICLIP™

Designed in association with Ingenico, the MultiClip universal payment mount provides stable mounting for their new Lane Series payment terminals.

SPACEPOLE PAYMENT

hybrid & mobile payments at a glance

A recent US study* revealed that retailers and quick service restaurants are boosting investment in technology in the quest for efficiency. Line busting solutions with associated mobile payments are a proven way to increase throughput and improve the customer experience. Our mounting solutions support static, hybrid, and mobile payments, whilst our M-Case sleeves connect mobile payment devices to our range of tablet enclosures and frames.

*Associated Press

SPACEPOLE SOLO™

The SpacePole Solo charging cradle is a secure mounting solution for static payment transactions with quick release and easy removal for instant mobility. This enables the payment terminal to be used as part of an mPOS solution in conjunction with the SpacePole Duo™ platform, for example. SpacePole Solo is compatible with our range of SpacePole payment mounts.

COMPATIBILITY

- ▶ Ingenico iSMP4
- ▶ Verifone e355

SECURITY OPTIONS

When combined with the Kensington push-lock, SpacePole Solo is in compliance with PCI best practice recommendations.

SPACEPOLE DOCK & CHARGE™

Using a tablet has brought a multitude of store and back office applications to life. However, many of these require a combination of static and mobile use by the operator. Dock & Charge answers this tricky issue. It combines a stylish enclosure with docking station for charging and stable WiFi connection. At the push of a button, it becomes a mobile sled for those mobility tasks, but is just as easily returned to its stand - from static to mobile and back again.
