

WHAT IS THE WS50 ANDROID WEARABLE COMPUTER?

The world's smallest all-in-one Android enterprise-class wearable mobile computer

Every task worker without mobile access to relevant information is forced to take more steps and more time to complete tasks, eroding operational efficiency. Now, connecting your disconnected workers is easy with Zebra's WS50. A game-changing platform adapts to a wide range of applications. This versatile computing core offers a modular design that lets you choose the mount that's right for the job. And unlike traditional ring scanner solutions, the WS50 is a true one-piece wearable solution — no host mobile computer is required!

WHY SHOULD YOU BUY THE WS50?

TOP 5 CUSTOMER BENEFITS

1

The power of ONE — simplify your mobility solution.

Want to deploy a wearable computing solution, but are concerned about the number of devices and batteries? The WS50's unique all-in-one solution eliminates the need to procure and manage separate mobile terminals and wearable scanners. That means fewer devices, batteries, chargers, soft goods and service contracts to manage — lowering the total cost of ownership. And your workers benefit too, since they only need to wear one small device to tackle their daily tasks.

2

The cost-effective way to connect your disconnected workforce.

Disconnected workers erode operational efficiency, making it harder to compete in today's on-demand economy. With the WS50, you can empower every task worker with a real-time connection to the information, tools and team needed to get the job done. The result? Each worker will always know their next task. Supervisors can instantly push urgent tasks and track status in real time. Workers can capture barcodes for split-second verification, collaborate via PTT voice and much more.

3

Android meets your needs, today and tomorrow.

While other solutions are based on a proprietary platform, the WS50 supports Android 11 — giving you the benefits of a familiar and consistent OS deployed throughout your operations. An industry-standard platform makes it easier and more cost-effective to develop the applications that your workflows require, and the WS50 can support new features and technologies for superior future-proofing. Best of all, when you choose Zebra, you get all the expertise from the leader in enterprise Android.

4

Built for the way you work.

With three different wearing styles, the versatile WS50 can be configured for virtually any task worker and application in practically any industry. The converged two finger and back-of-hand models are ideal for scan-intensive, rugged applications — for example, where workers are loading trucks, sorting boxes and putting away items. The wrist-mounted model is ideal for workers who need a mobile device for task management, communication, image capture and occasional barcode scanning.

5

Easy to deploy, use and manage.

The WS50 is designed for ease of use from day one. Complimentary Mobility DNA™ StageNow enables easy staging with a simple scan of a barcode or tap of an NFC tag. Compatibility with leading EMMs lets you manage all your mobile devices with a single pane of glass. Color-coded charging accessories make it easy to keep devices and batteries charged and organized in the backroom. And your workers will love the bright AMOLED display and simplified interface perfectly tailored for their task-based workflows.

APPLICATIONS

Retail

- Pricing/markdowns
- Back of store operations
- Task management

Warehousing/Manufacturing

- Sorting
- Put away
- Picking
- Loading/unloading
- Task management

Transportation & Logistics

- Sorting
- Loading/unloading

Hospitality

- Food service: restaurant servers; room service
- Housekeeping
- Janitorial service

ROI

- Increased staff productivity
- Reduced complexity and cost— fewer devices and batteries to purchase and manage
- Lower onboarding and training costs
